

Halloween Oobleck

Oobleck is a non-Newtonian fluid, which means it is not a liquid or a solid. At times, it may seem like a solid (when you apply pressure) but at other times it will act as a liquid (when you release the pressure).

Supplies Needed

- 2 cups cornstarch
- 1 cup water
- Food colouring - orange (or equal parts of red and yellow food colouring)
- Plastic bowl or bin
- Plastic spiders

Directions:

1. In a bowl, add 1 cup of water with the food colouring.
2. Add the cornstarch and mix until oobleck is formed.
3. Add plastic spiders to the concoction.
4. Enjoy!
