

Magical Potion!

In a magical world, wizards and witches use magical potions to do all kinds of magical things. Potions are cool-looking, fizzling things that you can replicate at home, with the help of science! Here are two types of magical potions you can make using simple ingredients!

Supplies Needed

- 1 pyrex dish
- 1 box of baking soda
- White vinegar
- Food colouring
- Small cups (as many as you want different colour potions)
- A dropper (a syringe would work as well)

Directions

1. Place the baking soda in the pyrex dish.
2. Prepare the colourful vinegar mixture: in each of your cups pour about 1/4 cup vinegar and 2 drops of your preferred food colouring. Make as many cups of vinegar mixture as you wish, depending on the colours you like.
3. With the dropper (or the syringe) suck some of the colourful vinegar mixture and slowly drop a couple of drops into the dish with the baking soda.
4. Watch it fizzle!! Magic!

You can also place the baking soda into some fun shaped glass containers if you want. Just make sure to place them on an easy to clean surface!
